AERIAL PHOTO OVERLAY

Add an entirely new dimension of site visibility by integrating aerial photos over your Titan GPS mapping dashboard. Users can upload photos from UAVs or aircraft and overlay them on the map to get true visibility into site topography, job status, changing conditions, or updated land developments.

Meta data extracted from each file automatically lays the aerial photograph over the corresponding Lat/Long, enabling users to get a truly current overview of any location.

Key Features

- Simple user photo upload
- Metadata location tagging
- Seamless integration with the Titan GPS dashboard

PRIMARY BENEFITS

- Additional perspective into locations
- Easier site planning
- Advanced map customization
