EFFICIENTLY TRACK AND MANAGE EVERY LOAD

Track and quantify material distribution. With Bluetooth connectivity, any mobile device becomes an in-cab Gravel Program application, eliminating the need for costly specialty hardware.

Users track key data points for every load, leading to higher efficiencies, more robust record-keeping, and better management of material and assets. The cloud-based solution does not require any local software installation, improving useability, service, and flexibility and integrates seamlessly to the Titan GPS MuniCAMS platform.

Primary Data Points

- Type of material
- Weight/volume
- Dump location
- Haul distance (based on GPS data)
- Distribution/spread rate

Key Features

- Mobile-connected
- Cloud-based platform
- Upgraded for better support and easy scalability
